HUMAID MUHAMMAD

Aspiring Cloud Engineer | Networking & Systems Foundation | DevOps-Track Student

Peshawar, Pakistan | +92 321 5126160 | 24pwcse2376@uetpeshawar.edu.pk | linkedin.com/in/humaidmuhammad-368456355

PROFESSIONAL SUMMARY

Computer Systems Engineering student at UET Peshawar (Class of 2028) transitioning from a pre-medical academic background into engineering — a shift that sharpened adaptability and self-directed learning ability. Builds practical experience through networking design labs, low-level systems programming, and independently developed web applications, with a clear long-term goal of specializing in cloud infrastructure (AWS, Kubernetes, distributed systems). Currently serves as Vice President of the Battagram Engineers Society, coordinating student-led technical and professional development initiatives. Seeking entry-level exposure — internship or junior role — in Cloud Engineering, DevOps, Platform Engineering, or Site Reliability Engineering.

TECHNICAL SKILLS

Networking: Cisco Packet Tracer, VLAN segmentation, Router-on-a-Stick inter-VLAN routing, DHCP, DNS configuration, Access Control Lists (ACLs), subnetting, OSI/TCP-IP model, Wireshark packet analysis

Programming & Data Structures: C, C++ (including C++98-compatible code), algorithm implementation (graph algorithms, memory management)

Operating Systems: Linux fundamentals, memory allocation strategies, process/thread concepts

Other: AI-assisted development / prompt engineering, MS Office, technical documentation and lab reporting

PROJECTS

Segmented Campus Network Design — *Cisco Packet Tracer — Academic Project*

- Designed a segmented network architecture for a campus (masjid/madrassah) environment, implementing VLANs to isolate traffic by function and department.
- Configured Router-on-a-Stick for inter-VLAN routing, along with DHCP for automated addressing, DNS resolution, and ACL-based access control policies.
- Presented and defended the design in a structured technical viva covering 135+ networking questions, demonstrating deep understanding of the underlying architecture rather than surface-level configuration.

Flat Single-Subnet Office Network — *Cisco Packet Tracer — CSE-203L Networking Lab*

- Designed and documented a single-subnet office network topology, producing a full technical report covering IP addressing, device configuration, and topology rationale.

Custom Memory Allocator — *C — Operating Systems Lab*

- Implemented a bitmap-based memory allocator in C supporting three block placement strategies: first-fit, best-fit, and worst-fit.
- Analyzed and compared fragmentation behavior and allocation efficiency across the three strategies.

Dijkstra's Shortest Path Algorithm — *C++ — Data Structures & Algorithms Lab (CSE-210L)*

- Implemented Dijkstra's algorithm in C++98-compatible code (Dev-C++ environment), including complexity analysis and a full lab report.

- **Automatic Toll Gate System — Arduino, Breadboard, Sensors — Independent Hardware Project**
  • Designed and built an automatic toll gate prototype using Arduino, a breadboard, and electronic sensors to detect approaching vehicles and control the gate opening and closing process automatically.
- **Vacuum Cleaner Robot Car — Arduino, Motor Driver, DC Motors — Independent Embedded Systems Project**
  • Developed an Arduino-based robotic vacuum cleaner car capable of autonomous movement, integrating DC motors, a motor driver, and a vacuum mechanism to demonstrate embedded systems, robotics, and automation concepts.
- **Fake News Detector Website — Web Development, Machine Learning — Social Action Project**
  • Developed a web-based fake news detection platform to help users identify potentially misleading news articles by leveraging machine learning techniques, promoting digital literacy and awareness against misinformation.

EDUCATION

BS Computer Systems Engineering — University of Engineering & Technology (UET), Peshawar

October 2024 – 2028 (Expected) | *Student ID: 24PWCSE2376, Section C*

Relevant Coursework: Data Structures & Algorithms, Computer Communication & Networks, Operating Systems, Digital Logic Design

CERTIFICATIONS

- Cisco Network Technician Certification

LEADERSHIP & ACTIVITIES

- Vice President, Battagram Engineers Society (BES) — coordinate initiatives promoting collaboration, leadership, and professional development among engineering students.
- Participant, GitHub Copilot Dev Days
- Participant, ICCIOT 2026 (International Conference on Computing, IoT and related technologies)

HONORS & AWARDS

- Punjab Honhaar Scholar ship
- District 3rd Position, FSc 2023
